Whether you're a local or tourist, we always feature our favorite spots along with all the new and exciting things our city has to offer.

This week our focus shifts away from lifestyle and entertainment to a more serious issue. As of this printing, there are only 14 cases of monkeypox virus in Nevada, and we want to help keep it that way. Monkeypox isn't new, but the surge can escalate to a public health crisis. Southern Nevada Health District has vaccines available but supplies are currently constrained so make your appointment today.

Russ White & Garrett Pattiani
Publishers, QVegas & QLife Media

Every week we spend a lot of time putting together the QVegas Guide to Las Vegas. It's a labor of love trying to find all the events, businesses and activities that we think the LGBTQ+ community would like.

We rely on advertisers to keep this a free resource. If you want to promote your event, business, or activity, contact us today!

MONKEYPOX

WHAT YOU NEED TO KNOW

SYMPTOMS APPEAR WITHIN 3 WEEKS OF EXPOSURE

Rash	Muscle aches/backache	Swollen lymph nodes
Fever	Sore throat	Chills
Headaches	Cough	Exhaustion

THOSE SYMPTOMS ARE USUALLY FOLLOWED BY A RASH, 1-4 DAYS LATER

THE RASH MAY ALSO BE INSIDE THE BODY, INCLUDING THE MOUTH, VAGINA, OR ANUS. IT MAY LOOK LIKE PIMPLES, BLISTERS, OR SCABS.

HERE'S HOW MONKEYPOX SPREADS:

Close Contact

- Contact with rash, scabs, or body fluids from a person with monkeypox
- Touching objects, fabrics and surfaces that have been used by someone infected
- Contact with respiratory secretions

Intimate Contact

- Oral, anal, vaginal sex & touching genital/intimate parts
- Face to face contact, massage, kissing
- Having multiple sex partners increases your chance of getting monkeypox

If you have symptoms, contact your doctor. Avoid sex or being intimate with anyone to prevent further infections.

REMINDER: MONKEYPOX IS NOT A "GAY DISEASE."

People who are at higher risk of exposure to #monkeypox can make appointments to get the vaccine at the Southern Nevada Health District.

The Health District is emphasizing it has received a limited amount of the vaccine, and appointment capacity will reflect the current monkeypox vaccine inventory. Additional doses of the monkeypox vaccine, have been requested and appointments will be expanded when they are received.

Current eligibility to receive the vaccine includes:

- Those who had close physical contact within the past 14 days with someone known or suspected of having monkeypox. This includes those who know or suspect their sexual partner(s) of having monkeypox.
- Those who have been informed by the Health District they are a close contact of someone with monkeypox.
- Gay, bisexual, or other men who have sex with men, and/or transgender, gender non-conforming, or gender non-binary who had multiple or anonymous sex partners in the last 14 days, especially at a venue, event, or within a social group where a person with a known or suspected case of monkeypox was present.

The Health District is urging everyone to take precautions to prevent infections. Anyone can get monkeypox. Fourteen probable and confirmed cases of monkeypox have been reported in Nevada as of August 1.

Monkeypox and Safer Sex

Talk to your partner about any recent illness and be aware of new or unexplained rash on your body or your partner's body, including the genitals and anus. If you or your partner have recently been sick, currently feel sick, or have a new or an unexplained rash, do not have sex and see a healthcare provider.

If you or a partner has monkeypox, the best way to protect yourself and others is to avoid sex of any kind (oral, anal, vaginal) and do not kiss or touch each other's bodies while you are sick, especially any rash. Do not share things like towels, fetish gear, sex toys, and toothbrushes.

If you or your partner have (or think you might have) monkeypox and you decide to have sex, consider the following to reduce the chance of spreading the virus:

- Have virtual sex with no in-person contact.
- Masturbate together at a distance of at least 6 feet, without touching each other and without touching any rash.
- Consider having sex with your clothes on or covering areas where rash is present, reducing as much skin-to-skin contact as possible. If the rash is confined to the genitals or anus, condoms may help; however, condoms alone are likely not enough to prevent monkeypox.
- Avoid kissing.
- Remember to wash your hands, fetish gear, sex toys and any fabrics (bedding, towels, clothing) after having sex.
- Having multiple or anonymous sex partners may increase your chances of exposure to monkeypox. Limiting your number of sex partners may reduce the possibility of exposure.
- Avoid touching the rash. Touching the rash can spread it to other parts of the body and may delay healing.

What should a person do if they have a new or unexplained rash or other symptoms?

- Avoid sex or being intimate with anyone until you have been checked out by a healthcare provider.
- If you don't have a provider or health insurance, visit a public health clinic near you.
- When you see a healthcare provider, wear a mask, and remind them that this virus is circulating in the area.
- Avoid gatherings, especially if they involve close, personal, skin-to-skin contact.
- Think about the people you have had close, personal, or sexual contact during the last 21 days, including people you met through dating apps. To help stop the spread, you might be asked to share this information if you have received a monkeypox diagnosis.
